

EXHIBIT 1

COMMONWEALTH OF VIRGINIA

SUMMONS – CIVIL ACTION RULE 3:5; VA. CODE § 8.01-2

Case No. CL21005490-00

RICHMOND CITY Circuit Court
400 NORTH 9TH STREET, RICHMOND 23219-
..... ADDRESS

TO:

MONSANTO COMPANY, SERVE: CORPORATION SERVICE
COMPANY, REGISTERED AGENT
100 SHOCKOE SLIP, SECOND FLOOR
RICHMOND, VA 23219-

The party upon whom this summons and the attached complaint are served is hereby notified that unless within 21 days after such service, response is made by filing in the clerk's office of this court a pleading in writing, in proper legal form, the allegations and charges may be taken as admitted and the court may enter an order, judgment or decree against such party either by default or after hearing evidence.

Appearance in person is not required by this summons.

Done in the name of the Commonwealth of Virginia.

DECEMBER 28, 2021 JEWETT, EDWARD F Clerk
DATE

by /S/ CRIGGER, JOHN
DEPUTY CLERK

Case No. _____

COMPLAINT

Plaintiff, David Lane ("Mr. Lane" or "Plaintiff"), by counsel, for his Complaint seeking judgment against Monsanto Company, alleges as follows:

NATURE OF THE CASE

1. This is an action for damages suffered by Plaintiff DAVID LANE as a direct and proximate result of Defendant's negligent, misleading, and wrongful conduct in connection with the design, development, manufacture, testing, packaging, promoting, marketing, advertising, distribution, labeling, and/or sale of the herbicide Roundup®, containing the active ingredient glyphosate.

2. Plaintiff maintains that Roundup® and/or glyphosate is defective, dangerous to human health, unfit or unsuitable to be marketed and sold in commerce, and lacked proper warnings and directions as to the dangers associated with use. Plaintiff's injuries were avoidable.

FACTS

3. At all relevant times, Defendant was in the business of, and did design, research, manufacture, test, advertise, promote, market, sell, distribute, and/or has acquired and is responsible for the commercial herbicide Roundup®.

4. Monsanto is a multinational agricultural biotechnology corporation headquartered in St. Louis, Missouri and does business throughout the Commonwealth of Virginia, including the City of Richmond, and maintains a registered agent in the City of Richmond, i.e., Corporation Service Company, 100 Shockoe Slip Fl 2, Richmond, Virginia 23219. It is the world's leading producer of glyphosate.

5. Defendant discovered the herbicidal properties of glyphosate during the 1970's and subsequently began to design, research, manufacturer, sell and distribute glyphosate-based Roundup® as a broad-spectrum herbicide.

6. Glyphosate is the active ingredient in Roundup®.

7. Glyphosate is a broad-spectrum herbicide used to kill weeds and grasses known to compete with commercial crops grown around the globe.

8. Glyphosate is a "non-selective" herbicide, meaning it kills indiscriminately based only on whether a given organism produces a specific enzyme, 5-enolpyruvylshikimic acid-3-phosphate synthase, known as EPSP synthase.

9. Glyphosate inhibits the enzyme 5-enolpyruvylshikimic acid-3-phosphate synthase that interferes with the shikimic pathway in plants, resulting in the accumulation of shikimic acid in plant tissue and ultimately plant death.

10. Sprayed as a liquid, plants absorb glyphosate directly through their leaves, stems, and roots, and detectable quantities accumulate in the plant tissues.

11. Each year, approximately 250 million pounds of glyphosate are sprayed on crops, commercial nurseries, suburban lawns, parks, and golf courses. This increase in use has been driven largely by the proliferation of genetically engineered crops, crops specifically tailored to resist the activity of glyphosate.

12. Defendant is intimately involved in the development, design, manufacture, marketing, sale, and /or distribution of genetically modified (“GMO”) crops, many of which are marketed as being resistant to Roundup®, e.g. “Roundup Ready®.” As of 2009, Defendant was the world’s leading producer of seeds designed to be Roundup Ready®. In 2010, an estimated 70% of corn and cotton, and 90% of soybean fields in the United States contained Roundup Ready® seeds.

13. The original Roundup®, containing the active ingredient glyphosate, was introduced in 1974. Today, glyphosate products are among the world’s mostly widely-used herbicides.¹

14. For nearly 40 years, consumers, farmers, and the public have used Roundup®, unaware of its carcinogenic properties.

15. In 1996, the New York Attorney General (“NYAG”) filed a lawsuit against Monsanto based on its false and misleading advertising of Roundup® products. Specifically, the lawsuit challenged Monsanto’s general representations that its spray-on glyphosate-based herbicides, including Roundup®, were “safer than table salt” and “practically non-toxic” to mammals, birds, and fish. Among the representations the NYAG found deceptive and misleading about the human and environmental safety of Roundup® were the following:

- a) Remember that environmentally friendly Roundup® herbicide is biodegradable. It won’t build up in the soil so you can use Roundup® with confidence along customers’ driveways, sidewalks and fences...
- b) And remember that Roundup® is biodegradable and won’t build up in the soil. That will give you the environmental confidence you need to use Roundup® everywhere you’ve got a weed, brush, edging or trimming problem.
- c) Roundup® biodegrades into naturally occurring elements.

¹ *Backgrounder, History of Monsanto’s Glyphosate Herbicides*, July 2002.

- d) Remember that versatile Roundup® herbicide stays where you put it. That means there's no washing or leaching to harm customers' shrubs or other desirable vegetation.
- e) This non-residual herbicide will not wash or leach in the soil. It...stays where you apply it.
- f) You can apply Accord with "confidence because it will stay where you put it" [;] it bonds tightly to soil particles, preventing leaching. Then, soon after application, soil microorganisms biodegrade Accord into natural products.
- g) Glyphosate is less toxic to rats than table salt following acute oral ingestion.
- h) Glyphosate's safety margin is much greater than required. It has over a 1,000-fold safety margin in food and over a 700-fold safety margin for workers who manufacture it or use it.
- i) You can feel good about using herbicides by Monsanto. They carry a toxicity category rating of 'practically non-toxic' as it pertains to mammals, birds and fish.
- j) "Roundup® can be used where kids and pets will play and breaks down into natural material." This ad depicts a person with his head in the ground and a pet dog standing in an area which has been treated with Roundup®.²

16. On November 19, 1996, Monsanto entered into an Assurance of Discontinuance with NYAG, in which Monsanto agreed, among other things, "to cease and desist from publishing or broadcasting any advertisements [in New York] that represent, directly or by implication" that:

- a) Its glyphosate-containing pesticide products or any component thereof are safe, non-toxic, harmless or free from risk.
- b) Its glyphosate-containing pesticide products or any component thereof manufactured, formulated, distributed or sold by Monsanto are biodegradable.
- c) Its glyphosate-containing pesticide products or any component thereof stay where they are applied under all circumstances and will not move through the environment by any means.

² Attorney General of the State of New York, In the Matter of Monsanto Company, Assurance of Discontinuance Pursuant to Executive Law § 63(15) (Nov. 1996).

- d) Its glyphosate-containing pesticide products or any component thereof are ‘good’ for the environment or are “known for their environmental characteristics.”
- e) Glyphosate-containing pesticide products or any component thereof are safer or less toxic than common consumer products other than herbicides;
- f) Its glyphosate-containing products or any component thereof might be classified as “practically non-toxic.”

17. Monsanto did not alter its advertising in the same manner in any state other than New York, and on information and belief still has not done so today.

18. In 2009, France’s highest court ruled that Monsanto had not told the truth about the safety of Roundup®. The French court affirmed an earlier judgment that Monsanto had falsely advertised its herbicide Roundup® as “biodegradable” and that it “left the soil clean.”³

19. As early as the 1980’s Monsanto was aware of glyphosate’s carcinogenic properties.

20. On March 4, 1985, a group of the Environmental Protection Agency’s (EPA”) Toxicology Branch published a memorandum classifying glyphosate as a Category C oncogene.⁴ Category C oncogenes are possible human carcinogens with limited evidence of carcinogenicity.

21. In 1986, the EPA issued a Registration Standard for glyphosate (NTIS PB87-103214). The Registration standard required additional phytotoxicity, environmental fate, toxicology, product chemistry, and residue chemical studies. All of the data required was submitted and reviewed and/or waived.⁵

³ *Monsanto Guilty in ‘False Ad’ Row*, BBC, Oct. 15, 2009, available at <http://news.bbc.co.uk/2/hi/europe/8308903.stm>.

⁴ Consensus Review of Glyphosate, Casewell No. 661A. March 4, 1985. United States Environmental Protection Agency.

⁵ <https://archive.epa.gov/pesticides/reregistration/web/pdf/0178fact.pdf>

22. In October 1991, the EPA published a Memorandum entitled “Second Peer Review of Glyphosate.” The memorandum changed glyphosate’s classification to Group E (evidence of non-carcinogenicity for humans). Two peer review committee members did not concur with the conclusions of the committee and one member refused to sign.⁶

23. In addition to the toxicity of the active molecule, many studies support the hypothesis that glyphosate formulations found in Defendant’s Roundup® products are more dangerous and toxic than glyphosate alone.⁷ As early as 1991, evidence existed demonstrating that glyphosate formulations were significantly more toxic than glyphosate alone.⁸

24. In 2002, Julie Marc published a study entitled “Pesticide Roundup Provokes Cell Division Dysfunction at the Level of CDK1/Cyclin B Activation.

25. The study found that Defendant’s Roundup® caused delays in the cell cycles of sea urchins, while the same concentrations of glyphosate alone proved ineffective and did not alter cell cycles.

26. In 2004, Julie Marc published a study entitled “Glyphosate-based pesticides affect cell cycle regulation.” The study demonstrated a molecular link between glyphosate-based products and cell cycle dysregulation.

27. The study noted that “cell-cycle dysregulation is a hallmark of tumor cells and human cancer. Failure in the cell-cycle checkpoints leads to genomic instability and subsequent development of cancers from the initial affected cell.” Further, “[s]ince cell cycle disorders such

⁶ Second Peer Review of Glyphosate, CAS No. 1071-83-6. October 30, 1991. United States Environmental Protection Agency.

⁷ Martinez et al. 2007; Benachour 2009; Gasnier et al. 2010; Peixoto 2005; Marc 2004.

⁸ Martinez et al 1991.

as cancer result from dysfunction of unique cell, it was of interest to evaluate the threshold dose of glyphosate affecting cells.”⁹

28. In 2005, Francisco Peixoto published a study showing that Roundup®’s effects on rat liver mitochondria are much more toxic and harmful than the same concentrations of glyphosate alone.

29. The Peixoto study suggested that the harmful effects of Roundup® on mitochondrial bioenergetics could not be exclusively attributed to glyphosate and could be the result of other chemicals, namely the surfactant POEA, or alternatively due to the possible synergy between glyphosate and Roundup® formulation products.

30. In 2009, Nora Benachour and Gilles-Eric Seralini published a study examining the effects of Roundup® and glyphosate on human umbilical, embryonic, and placental cells.

31. The study used dilution levels of Roundup® and glyphosate far below agricultural recommendations, corresponding with low levels of residues in food. The study concluded that supposed “inert” ingredients, and possibly POEA, change human cell permeability and amplify toxicity of glyphosate alone. The study further suggested that determinations of glyphosate toxicity should take into account the presence of adjuvants, or those chemicals used in the formulation of the complete pesticide. The study confirmed that the adjuvants in Roundup® are not inert and that Roundup® is always more toxic than its active ingredient glyphosate.

32. The results of these studies were confirmed in recently published peer-reviewed studies and were at all times available and/or known to Defendant.

⁹ Molinari, 2000; Stewart et al., 2003.

33. Defendant knew or should have known that Roundup® is more toxic than glyphosate alone and that safety studies on Roundup®, Roundup®'s adjuvants and "inert" ingredients, and/or the surfactant POEA were necessary to protect Plaintiff from Roundup®.

34. Defendant knew or should have known that tests limited to Roundup®'s active ingredient glyphosate were insufficient to prove the safety of Roundup®.

35. Defendant failed to appropriately and adequately test Roundup®, Roundup®'s adjuvants and "inert" ingredients, and/or the surfactant POEA to protect Plaintiff from Roundup®.

36. Rather than performing appropriate tests, Defendant relied upon flawed, industry-supported studies designed to protect Defendant's economic interests rather than Plaintiff and the consuming public.

37. Despite its knowledge that Roundup® was considerably more dangerous than glyphosate alone, Defendant continued to promote Roundup® as safe.

IARC CLASSIFICATION OF GLYPHOSATE

38. The International Agency for Research on Cancer ("IARC") is the specialized intergovernmental cancer agency the World Health Organization ("WHO") of the United Nations tasked with conducting and coordinating research into the causes of cancer.

39. An IARC Advisory Group to Recommend Priorities for IARC Monographs during 2015–2019 met in April 2014. Though nominations for the review were solicited, a substance must meet two criteria to be eligible for review by the IARC Monographs: there must already be some evidence of carcinogenicity of the substance, and there must be evidence that humans are exposed to the substance.

40. IARC set glyphosate for review in 2015-2016. IARC uses five criteria for determining priority in reviewing chemicals. The substance must have a potential for direct impact

on public health; scientific literature to support suspicion of carcinogenicity; evidence of significant human exposure; high public interest and/or potential to bring clarity to a controversial area and/or reduce public anxiety or concern; related agents similar to one given high priority by the above considerations. Data reviewed is sourced preferably from publicly accessible, peer-reviewed data.

41. On March 24, 2015, after its cumulative review of human, animal, and DNA studies for more than one (1) year, many of which have been in Defendant's possession since as early as 1985, the IARC's working group published its conclusion that the glyphosate contained in Defendant's Roundup® herbicide is a Class 2A "probable carcinogen" as demonstrated by the mechanistic evidence of carcinogenicity in humans and sufficient evidence of carcinogenicity in animals.

42. The IARC's full Monograph was published on July 29, 2015 and established glyphosate as a class 2A probable carcinogen to humans. According to the authors glyphosate demonstrated sufficient mechanistic evidence (genotoxicity and oxidative stress) to warrant a 2A classification based on evidence of carcinogenicity in humans and animals.

43. The IARC Working Group found an increased risk between exposure to glyphosate and non-Hodgkin's lymphoma ("NHL") and several subtypes of NHL, and the increased risk continued after adjustment for other pesticides.

44. The IARC also found that glyphosate caused DNA and chromosomal damage in human cells.

EARLIER EVIDENCE OF GLYPHOSATE'S DANGER

45. Despite the new classification by the IARC, Defendant has had ample evidence of glyphosate and Roundup®'s genotoxic properties for decades.

46. Genotoxicity refers to chemical agents that are capable of damaging the DNA within a cell through genetic mutations, which is a process that is believed to lead to cancer.

47. In 1997, Chris Clements published “Genotoxicity of select herbicides in *Rana catesbeiana* tadpoles using the alkaline single-cell gel DNA electrophoresis (comet) assay.”

48. The study found that tadpoles exposed to Roundup® showed significant DNA damage when compared with unexposed control animals.

49. Both human and animal studies have shown that glyphosate and glyphosate-based formulations such as Roundup® can induce oxidative stress.

50. Oxidative stress and associated chronic inflammation are believed to be involved in carcinogenesis.

51. The IARC Monograph notes that “[s]trong evidence exists that glyphosate, AMPA and glyphosate-based formulations can induce oxidative stress.”

52. In 2007, César Paz-y-Miño published a study examining DNA damage in human subjects exposed to glyphosate.

53. The study produced evidence of chromosomal damage in blood cells showing significantly greater damage after exposure to glyphosate than before in the same individuals, suggesting that the glyphosate formulation used during aerial spraying had a genotoxic effect on exposed individuals.

54. The IARC Monograph reflects the volume of evidence of glyphosate pesticides’ genotoxicity noting “[t]he evidence for genotoxicity caused by glyphosate-based formulations is strong.”

55. Despite knowledge to the contrary, Defendant maintains that there is no evidence that Roundup® is genotoxic, that regulatory authorities and independent experts are in agreement

that Roundup® is not genotoxic, and that there is no evidence that Roundup® is genotoxic. In addition to glyphosate and Roundup®'s genotoxic properties, Defendant has long been aware of glyphosate's carcinogenic properties.

56. Glyphosate and Roundup® in particular have long been associated with carcinogenicity and the development of numerous forms of cancer, including, but not limited to, non-Hodgkin's lymphoma, Hodgkin's lymphoma, multiple myeloma, and soft tissue sarcoma.

57. Defendant has known of this association since the early to mid-1980s and numerous human and animal studies have evidenced the carcinogenicity of glyphosate and/or Roundup®.

58. In 1985, the EPA studied the effects of glyphosate in mice finding a dose related response in male mice linked to renal tubal adenomas, a rare tumor. The study concluded the glyphosate was oncogenic.

59. In 2003, Lennart Hardell and Mikael Eriksson published the results of two case controlled studies on pesticides as a risk factor for NHL and hairy cell leukemia.

60. The study concluded that glyphosate had the most significant relationship to NHL among all herbicides studies with an increased odds ratio of 3.11.

61. In 2003, AJ De Roos published a study examining the pooled data of mid-western farmers, examining pesticides and herbicides as risk factors for NHL.

62. The study, which controlled for potential confounders, found a relationship between increased NHL incidence and glyphosate.

63. In 2008, Mikael Eriksson published a population-based, case-control study of exposure to various pesticides as a risk factor for NHL.

64. This strengthened previous associations between glyphosate and NHL.

65. In spite of this knowledge, Defendant continued to issue broad and sweeping statements suggesting that Roundup® was, and is, safer than ordinary household items such as table salt, despite a lack of scientific support for the accuracy and validity of these statements and, in fact, voluminous evidence to the contrary.

66. Upon information and belief, these statements and representations have been made with the intent of inducing Plaintiff, the agricultural community, and the public at large to purchase and increase the use of Defendant's Roundup® for Defendant's pecuniary gain, and in fact, did induce Plaintiff to use Roundup®.

67. Defendant made these statements with complete disregard and reckless indifference to the safety of Plaintiff and the general public.

68. Notwithstanding Defendant's representations, scientific evidence has established a clear association between glyphosate and genotoxicity, inflammation, and an increased risk of many cancers, including, but not limited to, NHL, Multiple Myeloma, and soft tissue sarcoma.

69. Defendant knew or should have known that glyphosate is associated with an increased risk of developing cancer, including, but not limited to, NHL, Multiple Myeloma, and soft tissue sarcomas.

70. Defendant failed to appropriately and adequately inform and warn Plaintiff of the serious and dangerous risks associated with the use of and exposure to glyphosate and/or Roundup®, including, but not limited to, the risk of developing NHL, as well as other severe and personal injuries, which are permanent and/or long-lasting in nature, cause significant physical pain and mental anguish, diminished enjoyment of life, and the need for medical treatment, monitoring and/or medications.

71. Despite the IARC's classification of glyphosate as a class 2A probable carcinogen, Defendant continues to maintain that glyphosate and/or Roundup® is safe, non-carcinogenic, nongenotoxic, and falsely warrant to users and the general public that independent experts and regulatory agencies agree that there is no evidence of carcinogenicity or genotoxicity in glyphosate and Roundup®.

72. Defendant has claimed and continue to claim that Roundup® is safe, noncarcinogenic, and non-genotoxic. These misrepresentations are consistent with Defendant's cavalier approach to investigating and ensuring the safety of its products, the safety of the public at large, and the safety of Plaintiff.

SPECIFIC FRAUD UNDERLYING THE SAFETY DETERMINATIONS OF GLYPHOSATE

73. After the EPA's 1985 classification of glyphosate as possibly carcinogenic to humans (Group C), Monsanto exerted pressure upon the EPA to change its classification.

74. This culminated in the EPA's reclassification of glyphosate to Group E, which was based upon evidence of non-carcinogenicity in humans.

75. In so classifying, the EPA stated that "[i]t should be emphasized, however, that designation of an agent in Group E is based on the available evidence at the time of evaluation and should not be interpreted as a definitive conclusion that the agent will not be a carcinogen under any circumstances."

76. On two occasions, the EPA found that laboratories hired by Monsanto to test the toxicity of its Roundup® products for registration purposes committed scientific fraud.

77. In the first instance, Monsanto hired Industrial Bio-Test Laboratories ("IBT") to perform and evaluate pesticide toxicology studies relating to Roundup®. IBT performed

approximately 30 tests on glyphosate and glyphosate-containing products, including 11 of the 19 chronic toxicology studies needed to register Roundup® with the EPA.

78. In 1976, the Food and Drug Administration (“FDA”) performed an inspection of IBT and discovered discrepancies between the raw data and the final report relating to toxicological impacts of glyphosate. The EPA subsequently audited IBT and determined that the toxicology studies conducted for Roundup® were invalid. An EPA reviewer stated, after finding “routine falsification of data” at IBT, that it was “hard to believe the scientific integrity of the studies when they said they took specimens of the uterus from male rabbits.”

79. Three top executives of IBT were convicted of fraud in 1983. In the second incident, Monsanto hired Craven Laboratories (“Craven”) in 1990 to perform pesticide and herbicide studies, including several studies on Roundup®.

80. In March of 1991, the EPA announced that it was investigating Craven for “allegedly falsifying test data used by chemical firms to win EPA approval of pesticides.”

81. The investigation led to the indictments of the laboratory owner and a handful of employees.

**MONSANTO’S CONTINUING DISREGARD FOR THE
SAFETY OF PLAINTIFF AND THE PUBLIC**

82. Monsanto claimed for years on its website that “[r]egulatory authorities and independent experts around the world have reviewed numerous long-term/carcinogenicity and genotoxicity studies and agree that there is no evidence that glyphosate, the active ingredient in Roundup® brand herbicides and other glyphosate-based herbicides, causes cancer, even at very high doses, and that it is not genotoxic.”¹⁰

¹⁰ Backgrounder – Glyphosate: No Evidence of Carcinogenicity. Updated November 2014. (downloaded October 9 2015).

83. Ironically, the primary source for this statement is a 1986 report by the WHO, the same organization that now considers glyphosate to be a probable carcinogen.

84. Glyphosate, and Defendant's Roundup® products in particular, have long been associated with serious side effects and many regulatory agencies around the globe have banned or are currently banning the use of glyphosate herbicide products.

85. Defendant's statements proclaiming the safety of Roundup® and disregarding its dangers misled Plaintiff.

86. Despite Defendant's knowledge that Roundup® was associated with an elevated risk of developing cancer, Defendant's promotional campaigns focused on Roundup®'s purported "safety profile."

87. Defendant's failure to adequately warn Plaintiff resulted in (1) Plaintiff using and being exposed to glyphosate instead of using another acceptable and safe method of controlling unwanted weeds and pests; and (2) scientists and physicians failing to warn and instruct consumers about the risk of cancer, including NHL, and other injuries associated with Roundup®.

88. Defendant failed to seek modification of the labeling of Roundup® to include relevant information regarding the risks and dangers associated with Roundup® exposure.

89. The failure of Defendant to appropriately warn and inform the EPA has resulted in inadequate warnings in safety information presented directly to users and consumers.

90. The failure of Defendant to appropriately warn and inform the EPA has resulted in the absence of warning or caution statements that are adequate to protect health and the environment.

91. The failure of Defendant to appropriately warn and inform the EPA has resulted in the directions for use that are not adequate to protect health and the environment.

92. By reason of the foregoing acts and omissions, Plaintiff seeks compensatory damages as a result of Plaintiff's use of, and exposure to, Roundup® which caused or was a substantial contributing factor in causing Plaintiff to suffer from cancer, specifically NHL, and Plaintiff suffered severe and personal injuries which are permanent and lasting in nature, physical pain and mental anguish, including diminished enjoyment of life.

93. By reason of the foregoing, Plaintiff is severely and permanently injured.

94. By reason of the foregoing acts and omissions, Plaintiff has endured and, in some categories continues to suffer, emotional and mental anguish, medical expenses, and other economic and non-economic damages, as a result of the actions and inactions of the Defendant.

PLAINTIFF DAVID LANE'S EXPOSURE TO ROUNDUP®

95. Plaintiff's exposure to Roundup® began in approximately 1990 and continued until 2020.

96. For years, Plaintiff personally mixed and/or sprayed Roundup® while working on his home, which is located in the City of Chesapeake, Virginia. Plaintiff also regularly used Roundup® in his employment as a superintendent for a construction company and then real estate development company. Plaintiff followed all safety and precautionary warnings during the course of use.

97. Plaintiff was subsequently diagnosed with a form of Non-Hodgkin's Lymphoma in 2008. The development of Plaintiff's form of Non-Hodgkin's Lymphoma was proximately and actually caused by exposure to Defendant's Roundup® products.

98. As a result of his injury, Plaintiff has incurred significant economic and noneconomic damages.

EQUITABLE TOLLING OF APPLICABLE STATUTE OF LIMITATIONS

99. Plaintiff incorporates by reference all prior paragraphs of this Complaint as if fully set forth herein.

100. The running of any statute of limitations has been tolled by reasons of Defendant's fraudulent concealment. Defendant, through its affirmative misrepresentations and omissions, actively concealed from Plaintiff the true risks associated with Roundup® and glyphosate.

101. At all relevant times, Defendant has maintained that Roundup® is safe, non-toxic, and non-carcinogenic.

102. Even now, Defendant continues to represent to the public that "When it comes to safety assessments, glyphosate is among the most extensively tested pesticides on the market. Evaluations spanning more than 40 years, and the overwhelming conclusion of experts and regulators worldwide, support the safety of glyphosate and that glyphosate does not cause cancer."¹¹

103. As a result of Defendant's actions, Plaintiff was unaware, and could not reasonably know or have learned through reasonable diligence that Roundup® and/or glyphosate contact, exposed Plaintiff to the risks alleged herein and that those risks were the direct and proximate result of Defendant's acts and omissions.

104. Furthermore, Defendant is estopped from relying on any statute of limitations because of its fraudulent concealment of the true character, quality and nature of Roundup®. Defendant was under a duty to disclose the true character, quality, and nature of Roundup®

¹¹ Glyphosate's Impact on Human Health and Safety, available at <https://www.bayer.com/en/glyphosate/glyphosate-impact-on-human-health-and-safety> (last accessed on December 27, 2021). Bayer, which owns Monsanto Company, now directs traffic for Monsanto Company's website to its own website.

because this was non-public information over which Defendant had and continues to have exclusive control, and because Defendant knew that this information was not available to Plaintiff or to distributors of Roundup®. In addition, Defendant is estopped from relying on any statute of limitations because of its intentional concealment of these facts.

105. Plaintiff had no knowledge that Defendant was engaged in the wrongdoing alleged herein. Because of the fraudulent acts of concealment of wrongdoing by Defendant, Plaintiff could not have reasonably discovered the wrongdoing at any time prior. Also, the economics of this fraud should be considered. Defendant had the ability to and did spend enormous amounts of money in furtherance of its purpose of marketing, promoting and/or distributing a profitable herbicide, notwithstanding the known or reasonably known risks. Plaintiff and medical professionals could not have afforded and could not have possibly conducted studies to determine the nature, extent, and identity of related health risks, and were forced to rely on only the Defendant's representations. Accordingly, Defendant is precluded by the discovery rule and/or the doctrine of fraudulent concealment from relying upon any statute of limitations.

COUNT I: NEGLIGENCE

106. Plaintiff repeats, reiterates, and re-alleges each and every allegation of this Complaint contained in each of the foregoing paragraphs inclusive, with the same force and effect as if more fully set forth herein.

107. Defendant had a duty to exercise reasonable care in the designing, researching, testing, manufacturing, marketing, supplying, promoting, packaging, sale, and/or distribution of Roundup® into the stream of commerce, including a duty to assure that the product would not cause users to suffer unreasonable, dangerous side effects.

108. Defendant failed to exercise ordinary care in the designing, researching, testing, manufacturing, marketing, supplying, promoting, packaging, sale, testing, quality assurance, quality control, and/or distribution of Roundup® into interstate commerce in that Defendant knew or should have known that using Roundup® created a high risk of unreasonable, dangerous side effects, including, but not limited to, the development of NHL, as well as other severe and personal injuries which are permanent and lasting in nature, physical pain and mental anguish, including diminished enjoyment of life, as well as need for lifelong medical treatment, monitoring, and/or medications.

109. The negligence by the Defendant, its agents, servants, and/or employees, included but was not limited to the following acts and/or omissions:

- a) Manufacturing, producing, promoting, formulating, creating, and/or designing Roundup® without thoroughly testing it;
- b) Failing to test Roundup® and/or failing to adequately, sufficiently, and properly test Roundup®;
- c) Not conducting sufficient testing programs to determine whether or not Roundup® was safe for use; in that Defendant herein knew or should have known that Roundup® was unsafe and unfit for use by reason of the dangers to its users;
- d) Not conducting sufficient testing programs and studies to determine Roundup®'s carcinogenic properties even after Defendant had knowledge that Roundup® is, was, or could be carcinogenic;
- e) Failing to conduct sufficient testing programs to determine the safety of "inert" ingredients and/or adjuvants contained within Roundup®, and the propensity of these ingredients to render Roundup® toxic, increase the toxicity of Roundup®, whether these ingredients are carcinogenic, magnify the carcinogenic properties of Roundup®, and whether or not "inert" ingredients and/or adjuvants were safe for use;
- f) Negligently failing to adequately and correctly warn the Plaintiff, the public, the medical and agricultural professions, and the EPA of the dangers of Roundup®;

- g) Negligently failing to petition the EPA to strengthen the warnings associated with Roundup®;
- h) Failing to provide adequate cautions and warnings to protect the health of users, handlers, applicators, and persons who would reasonably and foreseeably come into contact with Roundup®;
- i) Negligently marketing, advertising, and recommending the use of Roundup® without sufficient knowledge as to its dangerous propensities;
- j) Negligently representing that Roundup® was safe for use for its intended purpose, and/or that Roundup® was safer than ordinary and common items such as table salt, when, in fact, it was unsafe;
- k) Negligently representing that Roundup® had equivalent safety and efficacy as other forms of herbicides;
- l) Negligently designing Roundup® in a manner, which was dangerous to its users;
- m) Negligently manufacturing Roundup® in a manner, which was dangerous to its users;
- n) Negligently producing Roundup® in a manner, which was dangerous to its users;
- o) Negligently formulating Roundup® in a manner, which was dangerous to its users;
- p) Concealing information from the Plaintiff while knowing that Roundup® was unsafe, dangerous, and/or non-conforming with EPA regulations;
- q) Improperly concealing and/or misrepresenting information from the Plaintiff, scientific and medical professionals, and/or the EPA, concerning the severity of risks and dangers of Roundup® compared to other forms of herbicides; and
- r) Negligently selling Roundup® with a false and misleading label.

110. Defendant under-reported, underestimated, and downplayed the serious dangers of Roundup®.

111. Defendant negligently and deceptively compared the safety risks and/or dangers of Roundup® with common everyday foods such as table salt, and other forms of herbicides.

112. Defendant was negligent and/or violated Virginia law in the designing, researching, supplying, manufacturing, promoting, packaging, distributing, testing, advertising, warning, marketing, and selling of Roundup® in that they:

- a) Failed to use ordinary care in designing and manufacturing Roundup® so as to avoid the aforementioned risks to individuals when Roundup® was used as an herbicide;
- a) Failed to accompany its product with proper and/or accurate warnings regarding all possible adverse side effects associated with the use of Roundup®;
- b) Failed to accompany its product with proper warnings regarding all possible adverse side effects concerning the failure and/or malfunction of Roundup®;
- c) Failed to accompany its product with accurate warnings regarding the risks of all possible adverse side effects concerning Roundup®;
- d) Failed to warn Plaintiff of the severity and duration of such adverse effects, as the warnings given did not accurately reflect the symptoms, or severity of the side effects including, but not limited to, the development of NHL;
- e) Failed to conduct adequate testing, clinical testing and post-marketing surveillance to determine the safety of Roundup®;
- f) Failed to conduct adequate testing, clinical testing, and post-marketing surveillance to determine the safety of Roundup®'s "inert" ingredients and/or adjuvants;
- g) Negligently misrepresented the evidence of Roundup®'s genotoxicity and carcinogenicity; and
- h) Was otherwise careless and/or negligent.

113. Despite the fact that Defendant knew or should have known that Roundup® caused, or could cause, unreasonably dangerous side effects, Defendant continued and continues to market, manufacture, distribute, and/or sell Roundup® to consumers, including the Plaintiff.

114. Defendant knew or should have known that consumers such as the Plaintiff would foreseeably suffer injury as a result of Defendant's failure to exercise ordinary care, as set forth above.

115. Defendant's violations of law and/or negligence were the proximate cause of Plaintiff's injuries, harm and economic loss, which Plaintiff suffered and/or will continue to suffer.

116. As a result of the foregoing acts and omissions, Plaintiff suffered from serious and dangerous side effects including, but not limited to, NHL, as well as other severe and personal injuries which are permanent and lasting in nature, physical pain and mental anguish, diminished enjoyment of life, and financial expenses for hospitalization and medical care. Further, Plaintiff suffers life-threatening NHL, and severe personal injuries, which are permanent and lasting in nature, physical pain and mental anguish, including diminished enjoyment of life.

COUNT II: PRODUCT LIABILITY – DESIGN DEFECT

117. Plaintiff repeats, reiterates and, re-alleges each and every allegation of this Complaint contained in each of the foregoing paragraphs inclusive, with the same force and effect as if more fully set forth herein.

118. At all times herein mentioned, the Defendant designed, researched, manufactured, tested, advertised, promoted, sold, distributed Roundup® as hereinabove described that was used by the Plaintiff.

119. Defendant's Roundup® was expected to and did reach the usual consumers, handlers, and persons coming into contact with said product without substantial change in the condition in which it was produced, manufactured, sold, distributed, and marketed by the Defendant.

120. At those times, Roundup® was in an unsafe, defective, and inherently dangerous condition, which was dangerous to users, and in particular, the Plaintiff herein.

121. The Roundup® designed, researched, manufactured, tested, advertised, promoted, marketed, sold, and distributed by Defendant was defective in design or formulation in that, when

it left the hands of the manufacturer and/or suppliers, the foreseeable risks exceeded the benefits associated with the design or formulation of Roundup®.

122. The Roundup® designed, researched, manufactured, tested, advertised, promoted, marketed, sold, and distributed by Defendant was defective in design and/or formulation, in that, when it left the hands of the Defendant manufacturers and/or suppliers, it was unreasonably dangerous, unreasonably dangerous in normal use, and it was more dangerous than an ordinary consumer would expect.

123. At all times herein mentioned, Roundup® was in a defective condition and unsafe, and Defendant knew or had reason to know that said product was defective and unsafe, especially when used in the form and manner as provided by the Defendant. In particular, Defendant's Roundup® was defective in the following ways:

- a) When placed in the stream of commerce, Defendant's Roundup® products were defective in design and formulation and, consequently, dangerous to an extent beyond that which an ordinary consumer would anticipate.
- b) When placed in the stream of commerce, Defendant's Roundup® products were unreasonably dangerous in that they were hazardous and posed a grave risk of cancer and other serious illnesses when used in a reasonably anticipated manner.
- c) When placed in the stream of commerce, Defendant's Roundup® products contained unreasonably dangerous design defects and were not reasonably safe when used in a reasonably anticipated manner.
- d) Defendant did not sufficiently test, investigate, or study its Roundup® products.
- e) Exposure to Roundup® presents a risk of harmful side effects that outweigh any potential utility stemming from the use of the herbicide.
- f) Defendant knew or should have known at the time of marketing its Roundup® products that exposure to Roundup® could result in cancer and other severe illnesses

and injuries.

- g) Defendant did not conduct adequate post-marketing surveillance of its Roundup® products.

124. Defendant knew or should have known that at all times herein mentioned its Roundup® was in a defective condition, and was and is inherently dangerous and unsafe.

125. Plaintiff was exposed to Defendant's Roundup®, as described above, without knowledge of Roundup®'s dangerous characteristics.

126. At the time of the Plaintiff's use of and exposure to Roundup®, Roundup® was being used for the purposes and in a manner normally intended, as a broad-spectrum herbicide.

127. Defendant with this knowledge voluntarily designed its Roundup® with a dangerous condition for use by the public, and in particular the Plaintiff.

128. Defendant had a duty to create a product that was not unreasonably dangerous for its normal, intended use.

129. Defendant created a product that was and is unreasonably dangerous for its normal, intended use.

130. Defendant marketed and promoted a product in such a manner so as to make it inherently defective as the product downplayed its suspected, probable, and established health risks inherent with its normal, intended use.

131. The Roundup® designed, researched, manufactured, tested, advertised, promoted, marketed, sold, and distributed by Defendant was manufactured defectively in that Roundup® left the hands of Defendant in a defective condition and was unreasonably dangerous to its intended users.

132. The Roundup® designed, researched, manufactured, tested, advertised, promoted, marketed, sold, and distributed by Defendant reached its intended users in the same defective and unreasonably dangerous condition in which the Defendant's Roundup® was manufactured.

133. Defendant designed, researched, manufactured, tested, advertised, promoted, marketed, sold, and distributed a defective product, which created an unreasonable risk to the health of consumers and to the Plaintiff in particular, and Defendant is therefore liable for the injuries sustained by the Plaintiff.

134. Plaintiff could not, by the exercise of reasonable care, have discovered Roundup®'s defects herein mentioned or perceived its danger.

135. By reason of the foregoing, the Defendant has become liable to the Plaintiff for the manufacturing, marketing, promoting, distribution, and selling of a defective product, Roundup®.

136. Defendant's defective design of Roundup® amounts to willful, wanton, and/or reckless conduct by Defendant.

137. Defects in Defendant's Roundup® were the cause or a substantial factor in causing Plaintiff's injuries.

138. As a result of the foregoing acts and omission, Plaintiff developed NHL, and suffered severe and personal injuries, which are permanent and lasting in nature, physical pain and mental anguish, including diminished enjoyment of life, and financial expenses for hospitalization and medical care.

COUNT III: PRODUCT LIABILITY – FAILURE TO WARN

139. Plaintiff repeats, reiterates and re-alleges each and every allegation of this Complaint contained in each of the foregoing paragraphs inclusive, with the same force and effect as if more fully set forth herein.

140. Defendant has engaged in the business of selling, testing, distributing, supplying, manufacturing, marketing, and/or promoting Roundup®, and through that conduct have knowingly and intentionally placed Roundup® into the stream of commerce with full knowledge that it reaches consumers such as Plaintiff who is exposed to it through ordinary and reasonably foreseeable uses.

141. Defendant did in fact sell, distribute, supply, manufacture, and/or promote Roundup® to Plaintiff. Additionally, Defendant expected the Roundup® that it was selling, distributing, supplying, manufacturing, and/or promoting to reach – and Roundup® did in fact reach – consumers, including Plaintiff, without any substantial change in the condition of the product from when it was initially distributed by Defendant.

142. At the time of manufacture, Defendant could have provided the warnings or instructions regarding the full and complete risks of Roundup® and glyphosate-containing products because it knew or should have known of the unreasonable risks of harm associated with the use of and/or exposure to such products.

143. At all times herein mentioned, the aforesaid product was defective and unsafe in manufacture such that it was unreasonably dangerous to the user, and was so at the time it was distributed by Defendant and at the time Plaintiff was exposed to and/or ingested the product. The defective condition of Roundup® was due in part to the fact that it was not accompanied by proper warnings regarding its carcinogenic qualities and possible side effects, including, but not limited to, developing non-Hodgkin's lymphoma as a result of exposure and use.

144. Roundup® did not contain a warning or caution statement, which was necessary and, if complied with, was adequate to protect the health of those exposed in violation of 7 U.S.C. § 136j(a)(1)(E).

145. Defendant's failure to include a warning or caution statement, which was necessary and, if complied with, was adequate to protect the health of those exposed, violated 7 U.S.C. § 136j(a)(1)(E) as well as the laws of the State of Virginia.

146. Defendant could have amended the label of Roundup® to provide additional warnings.

147. This defect caused serious injury to Plaintiff, who used Roundup® in its intended and foreseeable manner.

148. At all times herein mentioned, Defendant had a duty to properly design, manufacture, compound, test, inspect, package, label, distribute, market, examine, maintain supply, provide proper warnings, and take such steps to assure that the product did not cause users to suffer from unreasonable and dangerous side effects.

149. Defendant labeled, distributed, and promoted the aforesaid product that it was dangerous and unsafe for the use and purpose for which it was intended.

150. Defendant failed to warn of the nature and scope of the side effects associated with Roundup®, namely its carcinogenic properties and its propensity to cause or serve as a substantial contributing factor in the development of NHL.

151. Defendant was aware of the probable consequences of the aforesaid conduct. Despite the fact that Defendant knew or should have known that Roundup® caused serious injuries, Defendant failed to exercise reasonable care to warn of the dangerous carcinogenic properties and side effect(s) of developing NHL from Roundup® exposure, even though these side effect(s) were known or reasonably scientifically knowable at the time of distribution. Defendant willfully and deliberately failed to avoid the consequences associated with its failure to warn, and in doing so, Defendant acted with a conscious disregard for the safety of the Plaintiff.

152. At the time of exposure, Plaintiff could not have reasonably discovered any defect in Roundup® at any time prior through the exercise of reasonable care.

153. Defendant, as the manufacturer and/or distributor of the subject product, is held to the level of knowledge of an expert in the field.

154. Plaintiff reasonably relied upon the skill, superior knowledge, and judgment of Defendant.

155. Had Defendant properly disclosed the risks associated with Roundup® products, Plaintiff would have avoided the risk of NHL by not using Roundup® products.

156. The information that Defendant did provide or communicate failed to contain adequate warnings and precautions that would have enabled Plaintiff, and similarly situated individuals, to utilize the product safely and with adequate protection. Instead, Defendant disseminated information that was inaccurate, false, and misleading, which failed to communicate accurately or adequately the comparative severity, duration, and extent of the risk of injuries associated with use of and/or exposure to Roundup® and glyphosate; continued to promote the efficacy of Roundup®, even after it knew or should have known of the unreasonable risks from use or exposure; and concealed, downplayed, or otherwise suppressed, through aggressive marketing and promotion, any information or research about the risks and dangers of exposure to Roundup® and glyphosate.

157. To this day, Defendant has failed to adequately warn of the true risks of Plaintiff's injuries associated with the use of and exposure to Roundup®.

158. As a result of its inadequate warnings, Defendant's Roundup® products were defective and unreasonably dangerous when they left the possession and/or control of Defendant, were distributed by Defendant, and ultimately used by Plaintiff.

159. As a direct and proximate result of Defendant's actions as alleged herein, and in such other ways to be later shown, the subject product caused Plaintiff to sustain injuries as alleged herein.

COUNT IV: BREACH OF IMPLIED WARRANTIES

160. Plaintiff repeats, reiterates, and re-alleges each and every allegation of this Complaint contained in each of the foregoing paragraphs inclusive, with the same force and effect all if more fully set forth herein.

161. At all times herein mentioned, the Defendant manufactured, distributed, compounded, recommended, merchandized, advertised, promoted, and sold Roundup® as a broad spectrum herbicide. These actions were under the ultimate control and supervision of Defendant.

162. At the time Defendant marketed, sold, and distributed Roundup® for use by Plaintiff, Defendant knew of Roundup®'s intended use and impliedly warranted the product to be of merchantable quality and safe and fit for this use.

163. The Defendant impliedly represented and warranted to Plaintiff and users of Roundup®, the agricultural community, and/or the EPA that Roundup® was safe and of merchantable quality and fit for the ordinary purpose for which it was to be used.

164. These representations and warranties were false, misleading, and inaccurate in that Roundup® was unsafe, unreasonably dangerous, not of merchantable quality, and defective.

165. Plaintiff and/or the EPA did rely on said implied warranty of merchantability of fitness for particular use and purpose.

166. Plaintiff reasonably relied upon the skill and judgment of Defendant as to whether Roundup® was of merchantable quality and safe and fit for its intended use.

167. Roundup® was injected into the stream of commerce by the Defendant in a defective, unsafe, and inherently dangerous condition, and the products' materials were expected to and did reach users, handlers, and persons coming into contact with said products without substantial change in the condition in which they were sold.

168. The Defendant breached the aforesaid implied warranties, as its herbicide Roundup® was not fit for its intended purposes and uses.

169. As a result of the foregoing acts and omissions, Plaintiff suffered from NHL and Plaintiff suffered severe and personal injuries which are permanent and lasting in nature, physical pain and mental anguish, including diminished enjoyment of life, financial expenses for hospitalization and medical care, including medical expenses and other economic, and noneconomic damages.

COUNT V: BREACH OF EXPRESS WARRANTY

170. Plaintiff repeats, reiterates, and re-alleges each and every allegation of this Complaint contained in each of the foregoing paragraphs inclusive, with the same force and effect as if more fully set forth herein.

171. At all relevant and material times, Defendant manufactured, distributed, advertised, promoted, and sold Roundup®.

172. At all relevant times, Defendant intended that the Defendant's Roundup® be used in the manner that Plaintiff used it, and Defendant expressly warranted that each Roundup® product was safe and fit for use by consumers, that it was of merchantable quality, that its health and side effects were minimal, and that it was adequately tested and fit for its intended use.

173. At all relevant times, Defendant was aware that consumers, including Plaintiff, would use Roundup® products; which is to say that Plaintiff was a foreseeable user of the Defendant's Roundup® products.

174. Plaintiff used Roundup® manufactured by Defendant.

175. Defendant's Roundup® products were expected to reach and did in fact reach consumers, including Plaintiff, without any substantial change in the condition in which it was manufactured and sold by Defendant.

176. Defendant expressly warranted that Roundup® was safe and not dangerous to users.

177. Defendant expressly represented to Plaintiff, scientists, the agricultural community, and/or the EPA that Roundup® was safe and fit for use for the purposes intended, that it was of merchantable quality, that it did not produce dangerous side effects in excess of those risks associated with other forms of herbicides, that the side effects it did produce were accurately reflected in the warnings, and that it was adequately tested and fit for its intended use.

178. Defendant breached various express warranties with respect to Roundup® including the following particulars: a) Defendant continues to represent to the public that "When it comes to safety assessments, glyphosate is among the most extensively tested pesticides on the market. Evaluations spanning more than 40 years, and the overwhelming conclusion of experts and regulators worldwide, support the safety of glyphosate and that glyphosate does not cause cancer."¹² b) Defendant has expressly warranted that Roundup® is "practically nontoxic."

¹² *Id.*

179. Roundup® did not conform to these express representations because Roundup® was not safe and had, at all relevant times, an increased risk of serious side effects, including non-Hodgkin's lymphoma, when used according to Defendant's instructions.

180. Defendant fraudulently concealed information from Plaintiff regarding the true dangers and relative risks of Roundup®.

181. The global scientific community is not, and was never, in agreement that Roundup® is non-carcinogenic.

182. Plaintiff did rely on the express warranties of the Defendant herein.

183. Plaintiff, consumers, and members of the agricultural community relied upon the representations and warranties of the Defendant for use of Roundup® in recommending, using, purchasing, mixing, handling, applying, and/or dispensing Roundup®.

184. The Defendant herein breached the aforesaid express warranties, as its product Roundup® was defective.

185. Defendant knew or should have known that, in fact, said representations and warranties were false, misleading, and untrue in that Roundup® was not safe and fit for the use intended, and, in fact, produced serious injuries to the users that were not accurately identified and represented by Defendant.

186. Defendant knew or should have known that, in fact, said warranties were false, misleading, and untrue in that there is evidence that Roundup® is toxic, genotoxic, and carcinogenic and that scientists and/or regulatory authorities around the world are not in agreement that Roundup® is not carcinogenic or genotoxic and that it is safe.

187. As a result of the foregoing acts and omissions, Plaintiff suffered from life threatening NHL and suffered severe and personal injuries, which are permanent and lasting in

nature, physical pain and mental anguish, including diminished enjoyment of life, and financial expenses for hospitalization and medical care.

188. As a result of the foregoing acts and omissions, Plaintiff has suffered and incurred damages, including medical expenses and other economic and non-economic damages.

COUNT VI: VIRGINIA CONSUMER PROTECTION ACT

189. Plaintiff repeats, reiterates, and re-alleges each and every allegation of this Complaint contained in each of the foregoing paragraphs inclusive, with the same force and effect as if more fully set forth herein.

190. Defendant is a “supplier” as defined by Virginia Code § 59.1-198.

191. Defendant represented that each Roundup® product was safe and fit for use by consumers, that it was of merchantable quality, that its health and side effects were minimal, and that it was adequately tested and fit for its intended use.

192. Defendant represented that Roundup® was safe and not dangerous to users.

193. Defendant represented to Plaintiff, scientists, the agricultural community, and/or the EPA that Roundup® was safe and fit for use for the purposes intended, that it was of merchantable quality, that it did not produce dangerous side effects in excess of those risks associated with other forms of herbicides, that the side effects it did produce were accurately reflected in the warnings, and that it was adequately tested and fit for its intended use.

194. Plaintiff relied on these representations and lack of warnings about the dangers of Roundup® in making his purchase decision.

195. Plaintiff purchased Roundup® for personal, family, or household use.

196. Roundup® did not conform to these representations because Roundup® was not safe and had, at all relevant times, an increased risk of serious side effects, including non-Hodgkin's lymphoma, when used according to Defendant's instructions.

197. Defendant misrepresented and fraudulently concealed information from Plaintiff regarding the true dangers and relative risks of Roundup®.

198. The global scientific community is not, and was never, in agreement that Roundup® is non-carcinogenic.

199. Defendant knew or should have known that, in fact, said representations and warranties were false, misleading, and untrue in that Roundup® was not safe and fit for the use intended, and, in fact, produced serious injuries to the users that were not accurately identified and represented by Defendant.

200. Defendant knew or should have known that, in fact, said representations were false, misleading, and untrue in that there is evidence that Roundup® is toxic, genotoxic, and carcinogenic and that scientists and/or regulatory authorities around the world are not in agreement that Roundup® is not carcinogenic or genotoxic and that it is safe.

201. As a result of the foregoing acts and omissions, Plaintiff suffered from life threatening NHL and suffered severe and personal injuries, which are permanent and lasting in nature, physical pain and mental anguish, including diminished enjoyment of life, and financial expenses for hospitalization and medical care.

202. Defendant is in violation of, at a minimum, Virginia Code § 59.1-200(A)(5), (A)(6), and (A)(14).

203. Defendant's actions, as described above, were willful as that term is issued in Virginia Code § 59.1-206.

204. As a result of the foregoing misrepresentations, Plaintiff has suffered and incurred damages, including medical expenses and other economic and non-economic damages.

205. If the jury determines that Defendant's conduct was willful, they may increase damages to amount not greater than three times that of the actual damages sustained.

206. In addition, Plaintiff is entitled to reasonable attorney's fee and court costs pursuant to Virginia Code § 59.1-206.

WHEREFORE, your Plaintiff prays that he be awarded judgment and execution thereon against the Defendant in the amount of SEVEN MILLION DOLLARS (\$7,000,000.00) as general damages, punitive damages, treble damages, plus pre-judgment and post-judgment interest as allowed by law, together with his attorney's fees and costs expended in this action, and any such other and further relief as this Court deems just and proper.

Plaintiff demands trial by jury on all issues and matters.

Respectfully submitted,

DAVID LANE
